

## Husband Planting Garlic

- Tilling already done
- Need to grab tools first (need to find them)
- Grab spade, hoe (toolshed), check condition of wheelbarrow (barn)
- Grab 2 stakes (garage)
- Grab garden twine from toolshed, untangle
- Tie several lengths of twine together
- Tie twine to stakes and plant stakes at either end of row
- One end of twine keeps slipping off
- Use hoe to dig furrow along twine
  - Had to switch to North side of twine, too much grass on South side
- Hoe broke, back to toolshed to get new hoe
- Keep going with new hoe
- Switch to spade to try digging furrow
- East stake keeps coming loose
- Switch back to hoe
- Go to toolshed to grab rake, plot isn't level
- Use rake to level the plot, discarding any loose weeds
- Rake handle threatening to splinter
- Switch back to spade
- Switch back to hoe
- Start placing cloves 4" apart in furrow
- Gloves have holes in them, need to go back to house to change pair
- Bulbs need to be broken up and sorted
  - Other vegetation (hay, onions, a potato) was in the bucket
- Will need a second row
- Grab bucket from house to hold the garlic for second row
- Re-cover first row with dirt using hoe
- Not really a second row, more like second side of a double row
- Double rows have less than 12" within, but 3' between
- Use hoe to create furrow for second half of double row
- Use spade on stubborn bits
- Place cloves 4" apart
- Grab more stakes from garage to mark rows
- Use rake to cover second half of double row
- Garlic Dance: use feet to compact freshly planted rows
